

## **ASUS ROUTER WALL CEILING MOUNT INSTRUCTION:**

This Mount will fit for these ASUS Routers:

- ASUS GT-AX11000
- ASUS RT-AC5300
- ASUS GT-AC5300

The shipping package include:

- 1x ASUS Router Mount Plate
- 1x ASUS Router Mount Plate Screw Template
- 4x Screw 4x35mm
- 10x Screw 3x12mm

You need:

- Screwdriver T10 and T20
- Water level
- Pencil

### How to mount:

**I am not responsible for any damage caused by improper use. You do it on your own risk!**

- 1) Place the mount plate centrally on the back of your ASUS router.
- 2) Bear in mind the direction of suspension when mounting on the wall! With the holder you have the possibility to choose from 4 different installation positions. Every 90 degrees.
- 3) Pay attention to the exact orientation of the plate. Otherwise the screws will not fit into the grid holes on the router.
- 4) Now put 4 screws of the 3x12mm screws on the outermost corners and tighten the screws carefully with feeling. Caution: If you overtighten the screws, you may damage your router.
- 5) Optional: You can attach all 10 screws if you want. However, 4 or 6 are good enough.
- 6) Now you can prepare the wall or the ceiling:
- 7) Put the template on the wall. The arrow must point upwards! Use a water level to straighten the template.
- 8) Now mark the holes on the wall with a pencil. At these points the 4x35mm screws come into the wall or ceiling.
- 9) Do not screw the screws all the way into the wall or ceiling. Let all screws peek out about 5mm evenly.
- 10) Now attach the router carefully. If the screw heads do not fit properly into the flange of the router mount plate, then tighten the 4x35 screws more or less.
- 11) That's it! Enjoy!
